Justin Harrison

jhar-dev@protonmail.com | (626) 491-6947 | Burbank, CA | justinharrison.dev | GitHub | Credly

Skills

AWS (Lambda, ECS, S3, DynamoDB, EventBridge, Step Functions, SQS, IAM, VPC, RDS, SSM, AppSync), Serverless, Docker
CI/CD (GitHub Actions), IaC (Terraform), workflow orchestration, observability (New Relic, CloudWatch), RCA, data pipelines
TypeScript, Python, SQL, Bash • Node.js, React, Next.js, Flask • Snowflake, PostgreSQL, MongoDB, Redis • Playwright, Jest

Experience

Engineer II, Massachusetts DFML via Last Call Media – Boston, MA — Mar 2024 – Sep 2025

Cloud infrastructure, DevOps, and platform reliability for a state benefits system disbursing ~$750M/year to 150k+ applicants.

- Served on leadership council, guiding strategy, multi-team planning, recruiting, delegation, and mentorship
- Built and optimized test infrastructure across 8 lower environments with GitHub Actions, SSM, and Docker/ECS
- Performed RCA using New Relic, CloudWatch, Python, Postgres, and Cypress Cloud to identify and resolve system issues
- Conducted load and stress testing to validate system behavior under peak usage and identify reliability risks
- Enhanced test observability by expanding New Relic dashboards with custom NRQL queries and React UI development
- Added synthetic monitoring using the New Relic Terraform provider to improve visibility into releases of 16 systems
- Maintained and extended a suite of 140+ E2E and integration tests written with Playwright, Cypress, and Jest
- Prevented ~1 production-bound defect per day (team-wide) through proactive testing, triage, and cross-team coordination
- Operated internal CLI tools for synthetic data generation and population via APIs and browser automation

Senior Software Engineer, Snail Games USA – Culver City, CA — 2021 – 2023

Cloud-native data engineering, Node/React development, and infra modernization for Twitch analytics and MarTech.

- Engineered a serverless data pipeline on AWS using EventBridge, Lambda (Node), DynamoDB, Twitch, S3, and Snowflake
- Refactored Node batch jobs to leverage Snowflake concurrency, reducing runtimes by 90–99%
- Maintained infrastructure for Node/Sails platform on DigitalOcean with NGINX load balancing and a MongoDB cluster
- Integrated IP geolocation services to detect circumvention of marketing campaign geo-restrictions
- Delivered features with React/Redux product UIs with modern CSS/SASS with a Node/Sails/MongoDB back-end
- Led mobile app development with TypeScript and React Native backed by cloud services and Stripe payments

Software Engineer, Building Safety Solutions – Pasadena, CA — 2017 - 2020

Safety training and engineering reference systems used by clients including Brookfield, Disney, Burj Khalifa, LA Metro and LAX

- Architected and built a serverless, GraphQL-based LMS/CMS on AWS, reducing infrastructure costs by over 90%
- Engineered AI-driven video transcription, translation, and WebVTT generation pipeline using AWS services
- Owned development of custom React/Redux based course-player components and interactive SVG tools for the LMS
- Developed React Native and Swift based mobile applications for multiple products backed by AWS services
- Maintained legacy Ruby on Rails and RDS/MSSQL systems hosted on AWS Windows Server
- Prototyped 3D model viewers using WebGL/A-Frame for building systems (electrical, water, etc) visualization
- Automated the conversion of cloud based courses to Scorm 2.0-compliant packages to meet client security specifications

Additional Experience

Web Engineer, Advercalls Inc – Beverly Hills, CA — 2016
Software Developer (Contract), Not That This, LLC – Burbank, CA — 2015
Web Developer, IT Helpdesk, University of California – Santa Barbara, CA — 2013-2015

Certifications

AWS Certified Solutions Architect - Associate — Expires 2027
AWS Certified Developer - Associate — Expires 2027
AWS Certified AI Practitioner (Early Adopter) — Expires 2027
HashiCorp Certified: Terraform Associate — Expires 2027

Education

University of California, Santa Barbara — BA Art (Creative Coding)
